

DRIFIRE® FR BASE LAYERS

DRIFIRE® Base Layers are expertly engineered with the needs of hardworking professionals in mind. Designed to withstand the toughest conditions, our innovative technology is integrated into every product, delivering safety, superior comfort, and breathability to help ensure that workers perform at their best.

WHY WEAR FR BASE LAYERS

COMBINED

19

CAL/CM²
ARC FLASH

Wearing the DRIFIRE® FR Control Long Sleeve T-Shirt with the DRIFIRE® TECGEN® FR Work Shirt, you can achieve a 19 cal/cm² arc rating and remain comfortable without sacrificing protection.

THE FIRST THING WORKERS PUT ON BECOMES THEIR LAST LINE OF DEFENSE

Per OSHA guidelines, garments must not increase the risk of injury. An FR base layer against the skin adds additional protection against burns and eliminates the possibility of a non-FR garment igniting underneath an FR work shirt, preventing more serious injuries.

INCREASED PROTECTION

FR base layers worn underneath other arc rated daily wear can often add significant protection and can easily be part of your daily FR work wear ensemble. To be compliant, layered systems must go through the appropriate arc flash testing. The amount of additional protection varies but some systems can increase the arc rating by up to 2.5 times.

INCREASED COMFORT

Wearing a 100% cotton undershirt can get uncomfortable on a hot day, making it tempting to cheat the system and wear one of your favorite athletic tees. DRIFIRE® base layers are designed to provide all the comfort of your favorite workout attire without the risk of injury. Moisture management helps to naturally cool the body and combining light layers increases your protection without the risk of causing overheating.

DRIFIRE® FR CAT 1 BASE LAYERS

DRIFIRE® FR LIGHTWEIGHT BASE LAYERS

FEATURES & BENEFIT:

- High durability for protection that lasts
- Same comfort that cotton provides with 2-3x faster drying capabilities
- Soft fabric prevents chafing and maximizes comfort
