# Featured FR Face Coverings

## FR FACE MASK USER INFORMATION

National Safety Apparel is proud to do our part to help others during this unprecedented time in our history. Teams in Cleveland and Chicago are producing hundreds of thousands of masks and other PPE for United States healthcare workers and essential industrial personnel.

**FR face masks are intended to reduce the spread of airborne particles for essential workers in settings that require FR**

They are not intended to serve as primary arc flash face protection and should not replace required PPE.

### Why should you wear FR face coverings?

- You could be a carrier of COVID-19 and not know it.
- Masks reduce the spread of airborne particles if you cough or sneeze.
- The CDC recommends wearing cloth masks in public when a 6' buffer can not be maintained.
- Social distancing, hand washing and other CDC recommendations should still be followed.

### How to adjust your mask correctly:

1. Place ear loops around both ears, covering your nose & mouth with the mask

2. Cinch adjustable ear loop to achieve proper mask fit

3. Tie a knot in the free end of the loop to secure

4. Tuck excess strap into the corner of the mask or trim with scissors
