## OUR MISSION:

# TO PROVIDE INNOVATIVE, QUALITY SAFETY APPAREL

In 1935 Wallace “Wally” Grossman graduated from school and realized employment wasn’t going to be easy due to the economic conditions. As a result, he started a business in his father’s basement where he began to manufacture Heat and Thermal protective apparel. It wasn’t long before the business took off and his father, George, quit his job and began working alongside his son. Together they started a successful family business during severe economic conditions.

The family business has continued to grow over the years and is known today as, National Safety Apparel®. When asked about the history of NSA, Chuck Grossman, current owner and President responded with: “Our business began with Heat and Thermal products and the intent to provide the highest quality protective apparel for individuals working in high heat environments. Today, we are a fourth generation family-owned business that understands the importance of safety, quality, comfort, and customization. We continue to innovate and enhance our safety products offering. Innovation is the core value that drives us each day.”

At National Safety Apparel®, we provide many advantages to help make your purchasing decision easier. We are proud to manufacture in the U.S. and be certified to ISO 9001 with design, which allows us to offer product customization and personalization to any of our products and the ability to develop products to best meet your specific needs and hazards. Our outside sales team and inside customer service department are ready and able to address your needs, questions, and requests. Since 1935, workers across the country have relied on NSA’s quality craftsmanship.

## WHY NSA? \_\_\_\_\_

### HEADQUARTERS

*Proudly manufacturing in  
Cleveland, Ohio since 1935.*

### STOCK ITEMS

*NSA carries a large number of stock  
products to meet the needs of  
customers.*

### PERSONALIZED CUSTOMER SERVICE

*NSA provides a friendly customer service  
staff that is on call Monday through  
Friday, 8am-7pm EST. to help fulfill your  
safety apparel needs..*

### ISO CERTIFIED

*NSA is certified to ISO 9001:2015  
with design.*

### FABRIC CHOICES

*NSA carries a variety of fabrics to meet  
your needs. Multiple color, weight, and  
style options give you the freedom to  
choose exactly what you are looking for.*

### CUSTOMIZATION

*The possibilities are endless— NSA can  
customize almost every garment carried  
to meet your company requirements.*

# ARC RATED/ FLAME RESISTANT HI-VIS WORKWEAR

DRIFIRE® and VIZABLE® FR offers the quality protection that is needed for job applications calling for Flame Resistant (FR) and Arc Resistant (AR) high visibility protective apparel.

Representing the next level of where comfort meets protection, all AR/FR garments offer high visibility and flame resistant trim, segmented or solid. Select from a variety of styles and add a corporate logo to make it one of a kind for your company.

CHECK OUT THIS VIDEO!  
FR TRIM vs. NON FR TRIM

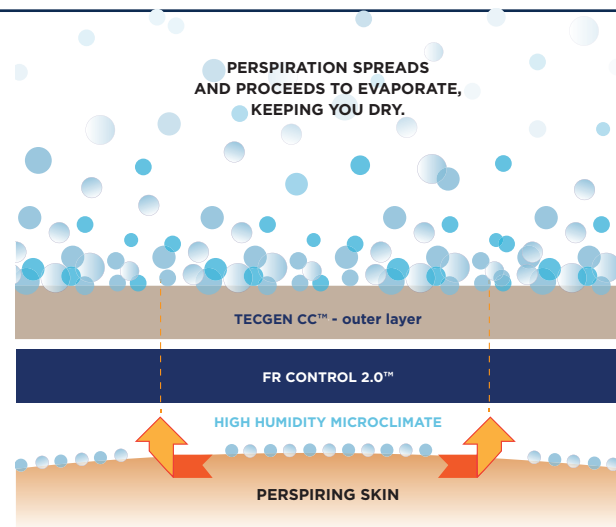

## WORKER COMFORT BEGINS HERE

Our FR Control 2.0™ performance AR/FR garments offer both proactive and reactive properties. The proactive technology works to actively regulate skin temperature and test reports show that perspiration is reduced by as much as 34%. Once perspiration starts, the reactive technology will wick moisture from the skin by absorbing and forcing it to the exterior of the fabric, away from the body where it can then quickly evaporate. Moisture wicking is one of the most important steps in creating a layering system.

Some FR shirts, pants, and coveralls contain breathable and wicking properties to create a moisture management layering system. Once a base layer wicks liquid away from the skin and pushes it to the exterior, the moisture can become trapped or be wicked by the primary or outer layer depending on the fabric properties of the outer layer. A complete moisture management system features a base layer and outer layer that wicks moisture away and can be structured to not only provide increased FR protection, but increased comfort, breathability, and drying rate as well.

### FLAME RESISTANCE

PERMANENT, NO-MELT, NO-DRIP FLAME RESISTANCE MEANS PEACE OF MIND.

### ODOR CONTROL

AFTER WORKING UP A SWEAT, YOU DON'T HAVE TO WORRY ABOUT THE STINK.

### MOISTURE MANAGEMENT

THE ULTIMATE COMFORT OF DRIFIRE® GARMENTS IS DUE TO ITS PERMANENT MOISTURE MANAGEMENT TECHNOLOGY.

### INHERENT FR PROTECTION WON'T WASH OUT

THE FR, MOISTURE MANAGEMENT, AND ODOR CONTROL ARE BUILT DIRECTLY INTO THE FIBERS AND WON'T WASH OUT.

# THERE'S A CLASS FOR THAT

## ANSI 107 SIMPLIFIED

### TYPE O – OFF-ROAD – CLASS 1

- Type O provides conspicuity for non-roadway applications

**APPLICATIONS:** Oil & Gas, Mining, Manufacturing Plants, Parking Lots

#### CLASS 1 REQUIREMENTS

Background Material	217in <sup>2</sup>
Retroreflective Tape	155in <sup>2</sup>
Minimum Width of Tape	.98in

### TYPE R – ROADWAY – CLASS 2&3

- Type R should be worn on or near public access roadways or highways in which work takes place in close proximity to vehicle traffic.
- Class 2-** Allows for better definition of the human form than class 1
- Class 3-** Offers greater visibility of the wearer through a full range of body movements

**APPLICATIONS:** Road Construction & Maintenance, Utility Maintenance, Transportation (Air, Rail, & Road)

\* Smallest size measurements apply to Type R only

#### CLASS 2 REQUIREMENTS

Background Material	775in <sup>2</sup> *
Retroreflective Tape	201in <sup>2</sup>
Minimum Width of Tape	1.38in

\* Smallest Size= 540in<sup>2</sup>

#### CLASS 3 REQUIREMENTS

Background Material	1240in <sup>2</sup> *
Retroreflective Tape	310in <sup>2</sup>
Minimum Width of Tape	1.97in

\* Smallest Size= 1000in<sup>2</sup>

\* Smallest size measurements apply to Type R only

### TYPE P – PUBLIC SAFETY – CLASS 2&3

- Type P is used by emergency responders for work environments exposed to vehicle traffic. Formerly covered in ANSI/ISEA 207

**FIRST RESPONDERS:** Fire, Police, EMS, & Other Public Safety Personnel

Class 3

### SUPPLEMENTAL ITEMS – CLASS E

- Adding Class E leg wear to a Class 2 vest or shirt creates a Class 3 ensemble
- Leg wear can include leg gaiters, bib overalls, coveralls, and pants

**Use a Hazard Assessment to determine if Class 3 is needed for types R and P**

- Night work
- High volume high speed traffic
- Complex competing backgrounds

## DIFFERENCE BETWEEN CLASSES

### How do I know if I have a Class 2 or Class 3 garment?

The easiest way to tell without measuring square inches is identifying whether the arms or legs are marked with reflective trim.

SLEEVES WITH REFLECTIVE  
TRIM = CLASS 3

In order to be Class 3, a vest, shirt or jacket **MUST** have reflective material on the sleeves. The main reason for this is to help drivers distinguish the difference between the human form versus cones, delineators, barrels, and other devices marking the roadway. To summarize, a sleeveless vest cannot meet Class 3 on its own.

CLASS 2 VEST + LEG GAITERS = CLASS 3

### How do you turn a Class 2 vest or jacket into Class 3?

Easy, add Class E leg gaiters, pants or bibs. Legwear that meets the ANSI 107 requirements for Class E devices can be combined with Class 2 garments to create a "Class 3 Ensemble". See the table of background requirements on page 19 for more information.

## What is the difference in Flame Resistant (FR) and Arc Rated (AR) Fabric?

This is a great question that is often asked. The simple answer is: **All arc rated fabrics are flame resistant.** However, **all flame resistant fabrics are NOT arc rated.**

In order to be considered **flame resistant**, a fabric must not melt or drip and cannot exceed the char length (per ASTM F1506, less than 6"; per NFPA 2112, less than 4") or afterflame time when tested according to ASTM D6413, which measures the vertical flame resistance of fabrics. Once the ignition source has been removed, the fabric must self-extinguish, cannot melt or drip, and the char length cannot exceed the test specifications.

**Arc rated** fabrics are tested to ASTM 1959, which requires any fabric submitted for testing to be flame resistant. This test is used to measure and describe the properties of fabrics in response to convective and radiant energy, generated by an electric arc, in controlled laboratory conditions. By simulating an arc, the test measures the incident energy on fabric that results in a 50% probability of the on-set of second-degree skin burn injury. Arc ratings can be reported to ATPV (Arc Thermal Performance Value) or EBT (EBT Breakopen Threshold Energy).

## PERSONALIZE YOUR GARMENTS

1

Provide high resolution artwork for the logo — We recommend maximum 2"x 4" logos for the front chest and maximum of 8"x 8" logos for the back, to stay compliant with the new ANSI 107-2015 standard specifying logo allowances and balanced design criteria for vests.

2

Provide the garment location for the logo

3

We will provide you with a full colored proof image of the customized garment for your final approval

## ANSI 107 TYPE R: SMALLEST SIZE

The ANSI 107-2015 update has added a smallest size to Type R, roadway applications only. This update allows smaller sized workers to have workwear that fits them properly while still maintaining compliance. There are multiple hazards that must be considered when working near moving equipment or on the road, including garments catching onto equipment and passing vehicles, making the new smallest size an important addition to ANSI 107 requirements. In terms of ergonomics, a garment that is too large can hinder a workers' body movements and cause discomfort in hot and extreme weather. ANSI's new smallest size allows all workers to choose garments with an appropriate fit that still maintain compliance.

The below measurements detail the appropriate amount of background material needed in accordance with the new smallest size.

**Class 2** = 540in<sup>2</sup> background material  
instead of 775in<sup>2</sup>

**Class 3** = 1000in<sup>2</sup> background material  
instead of 1240in<sup>2</sup>

**GORE-TEX  
PYRAD®**

PRODUCTS

**GORE-TEX  
PYRAD®**

PRODUCTS

The highly breathable construction of GORE-TEX PYRAD® fabric helps decrease sweat buildup, keeping workers cooler in warm conditions and warmer in cool conditions. This lightweight fabric dries to the touch quickly, reducing the uncomfortable, cold, clammy feeling from damp foul weather gear. GORE-TEX PYRAD is proven protection from the elements and arc flash and flash fire.

**FEATURES:**

- 10.6 oz. Fluorescent polyurethane on FR cotton
- 100% Waterproof with welded seams
- Covered zip front closure with snap storm flap
- 2 Front pockets with flaps
- Jacket with back ventilation system with d-ring opening
- FR Hook & loop tabs to adjust leg cuff
- Heavy duty quick release suspender system
- Made in the USA

**KIT INCLUDES:**

- Fluorescent PU/FR cotton knit jacket
- Fluorescent PU/FR cotton knit bib overall
- Drip dry mesh bag for storage

# ALL REFLECTIVE TRIM IS NOT CREATED EQUAL

ALL SILVER IS NOT  
CREATED EQUAL  
3M TESTING  
INFORMATION

ALL SILVER IS  
NOT CREATED  
EQUAL VIDEO

Independent testing shows that 1 in 3 non 3M™ Scotchlite™ Reflective Material garments purchased in the open market is not compliant to the ANSI 107/EN 471 for Standard Level 2 reflective brightness.

## Compliance Matters

- Innovators in retroreflective technology
- Advancing the science of visibility for over 70 years
- Continuous testing to ensure every lot of material is compliant before it leaves our factory
- Quality you know you can trust to help keep workers safe
- Products that perform to your specifications
- Third party certificates from accredited labs
- Confidence your garment is compliant

PROUD TO PARTNER WITH

# VIZABLE® HI-VIS WORKWEAR

Why Hi-Vis? High visibility workwear distinguishes the wearer from the background environment they are working in and around. Properly constructed, hi-vis garments provide greater worker visibility in low light and high traffic areas.

Scan the QR code below with your mobile device to be taken to the Vizable® Hi-Vis section of our website to see the extensive selection of products we offer, stock and made-to-order.

## MAKE IT YOURS

We can add an X back configuration of reflective trim, a d-ring, or mic-clip bands to our standard offerings. Simply add the letter or letters for the feature you would like to add to the end of the standard part number and request a quote from our customer service team.

*\*All the features to the right are eligible for flame resistant and hi-vis workwear products except outerwear. If one of these features are wanted, the product is treated as a made-to-order product and requires a 3-4 week lead time. Minimums apply for custom features. Contact our customer service team at [customerservice@thinkNSA.com](mailto:customerservice@thinkNSA.com) or 1.800.553.0672 to learn more.*

For an X back configuration, **add “XB”** to the end of the product number you would like to order.

To add a D-Ring opening to a product you would like to order, **add “D”** to the end of the product number.

If you would like to include dual mic-clip bands to the product you are ordering, **add “MC”** to the end of the product code.

## HOW TO DECIDE BETWEEN YELLOW & ORANGE

When evaluating high visibility safety apparel, how does one choose between yellow and orange safety vests or work wear? Which color provides the best protection? Our sensitivity to color, the work environment and subconscious responses contribute to our opinion as to which color provides the best protection. When comparing the two colors, many people will say that yellow appears “brighter.” This is true when considering the color of the garment alone, but there are other variables. To answer the question of whether orange or yellow is safer, we will explore a few additional factors and their impact on overall conspicuity, or visibility.

Conspicuity refers to the ability of an object to come to the attention of an observer. This is especially important in complex environments with competing objects - for example, a crew working on a utility pole at a busy urban cross street, or a First Responder on scene at a highway accident. Drivers have so many objects competing for their attention during their daily drive: how do we ensure workers adjacent to the roadway are noticed? We make them conspicuous through contrast and recognition.

### Choosing Between Orange and Yellow High Visibility Apparel - Which is Safer?

An exclusive white paper

Learn more about the differences between yellow and orange hi-vis workwear in our exclusive white paper!

### **FLASH FIRE**

A flash fire is a sudden, intense fire caused by ignition of a mixture of air and a dispersed flammable substance such as a solid (including dust), flammable or combustible liquid (aerosol or fine mist), or a flammable gas. It is characterized by high temperature, short duration, and a rapidly moving flame front.

### **ARC FLASH**

An arc flash is an undesired electric discharge that travels through the air between conductors or from a conductor to a ground. The resulting violent explosion is very dangerous with temperatures that could reach up to 35,000 degrees Fahrenheit. An arc flash can cause fires, ignite clothing and burn skin and be lethal to the worker.

### **ANSI / ISEA 207-2011**

This standard specifies performance requirements for high-visibility clothing used by Public Safety Workers. ANSI/ISEA 207 has been replaced by ANSI/ISEA 107-2015 Type P and will not be updated.

### **NFPA 2112**

This is a standard on FR garments for protection of industrial personnel against flash fire. It provides minimum requirements for the design, construction, evaluation, and certification. Garments are required to be certified by an Accredited 3rd party. The garment must be labeled as compliant and include the certifying agency. NSA Flash Fire garments are all UL Certified compliant with the test methods and design requirements of NFPA 2112.

### **NFPA 70E**

This standard defines requirements for safe work practices to protect personnel by reducing exposure to major electrical hazards. Originally developed at OSHA's request, NFPA 70E helps companies and employees avoid workplace injuries and fatalities due to shock, electrocution, arc flash, and arc blast.

### **ASTM F1891**

This is a standard that provides minimum arc flash resistance requirements for FR rainwear. The standard gives provisions that a garment must meet for arc resistance, construction, water resistance and tear resistance.

### **ASTM F2733**

This is a standard that provides requirements specifically for flash fire rainwear. This standard includes similar flash fire testing to NFPA 2112 with the additional requirement of an "as sold" garment flash fire testing, and water resistance specifications. ASTM F2733 is also stricter than NFPA 2112 in the predicted body burn max being 40% instead of 50%.

## HVSA

High visibility safety apparel or HVSA is used to mean apparel and accessory PPE intended to provide conspicuity to the wearer in hazardous situations.

## ANSI / ISEA 107-2015

ANSI/ISEA 107-2015 for HVSA and accessories is an industry consensus standard that specifies requirements for apparel that is capable of visually signaling the user's presence.

It was developed by the International Safety Equipment Association (ISEA) and first published in 1999. Since then, the standard has been recognized and compliance mandated by federal, state and local authorities as well as private industry entities. Today, the U.S. Department of Transportation's Federal Highway Administration (FHWA) requires workers in or near a highway right-of-way to wear garments that comply with the standard.

This standard includes 3 garment types and specifications for

Performance Class 1, 2, 3, and E.

The updated standard brings both ANSI 107 and ANSI 207 together under 1 comprehensive standard. Most requirements remain the same. One of the main enhancements is the addition of HVSA TYPES.

### NEW HVSA Types

- Type O = Off Road - Non Roadway
- Type R = Roadway & traffic zones
- Type P = Public Safety (previously ANSI 207)

Class 1 for Visibility in non-roadway or off roadwork zones

Class 2 for visibility on or adjacent to the roadway or traffic control zones.

Class 3 for Visibility on or where workers are exposed to higher volume and traffic at speeds, low light, complex backgrounds, and workers have a high task load

Class E Combine ANSI Class E legwear, bibs, or pants with a Class 2 HVSA and the ensemble

is considered Performance Class 3. For greater conspicuity with the work environment also you may combine Class E legwear and Class 3 HVSA.
